Console

Version 1.0 | As seen on Console

What is a Dashboard?

A dashboard is a tool that visualizes key performance indicators (KPIs) and underlying records, like Call Detail Records (CDRs) to understand, monitor, and improve a process or service. A dashboard is linked to data sources for real-time updates, and displays information in the form of charts, gauges, and tables.

"Analytics is the discovery, interpretation, and communication of meaningful patterns in data. Especially valuable in areas rich with recorded information, analytics relies on the simultaneous application of statistics, computer programming and operations research to quantify performance. Analytics often favors data visualization to communicate insight."

AnyConnect

AnyConnect Console

Console is AnyConnect's cloud-based tool for managing your connected camera deployments. Console provides a real-time view of KPIs and CDRs, including camera activity, health, exception reporting and much more.

Console is used to manage the entire camera life cycle – from creating keys that enable cameras to use AnyConnect cloud services to managing deployments and supporting cameras and end users.
AnyConnect

Dashboard Challenges

A dashboard must support deployments of hundreds of thousands of cameras and millions of CDRs, originating from different geographic regions worldwide. This presents many challenges to a dashboard with real-time updates, including.

Verified Purchase

I'm not tech savvy at all, and I understanding setting up new connected cameras aren't the simplest things to do. To my surprise, setting this up was relatively easy, especially when compared to other cameras I've bought and tried before this. I can highly recommend this to anyone looking to buy a new smart camera!
